AWNING FEATURES:

FABRIC ROLL The awning fabric is rolled onto the rotating, surface-treated steel fabric roll. Spettmann fabric rolls have a diameter of 2.75 or 3 inches, and their stability guarantees that the awning fabric remains taut.

WALL BRACKET

Spettmann offers wall brackets for walls, ceilings and rafter installations. The torsion bars of the open awning, or the entire cassette awning, are hung in the stable aluminum components.

- AWNING PROTECTION The awning fabric must be well

protected from wind and weather. The range of Spettmann products encompasses simple protective sleeves, as well as protective covers and half and fully-enclosed cassettes. For semi-cassette awnings, the fabric is almost completely housed in an aluminum casing.

AWNING FABRIC

The awning fabric provides comfortable shade, and protection from UV rays and glare. The high quality awning fabrics used by Spettmann are made from weather-resistant, spinneret-dyed fibers, and are available in hundreds of different colors and designs.

- PITCH

The standard crank pitch of a Spettmann awning is 15°. However, the pitch can be adjusted to anywhere between O° and 45° degrees.

TORSION BAR

the fabric roll, and transfers the significant force generated by the awning fabric to the fittings. For this reason, the surface-treated The awning is operated by a Spettmann torsion bars are motor or a remote operated extremely stable, and manufactured from square steel sections of 1.6 x 1.6 inches.

The torsion bar sits beneath

HINGED ARM

The hinged arms, with internal springs, guarantee that the awning fabric is taut - made from powder-coated aluminum, which ensures a high degree of stability, and reliable protection from vertical impacts. The middle hinge and bracket are completely maintenance-free.

VALANCE

The valance is an ornamental element of the fabric, which forms an attractive front for your awning, and is simply hung off the front bar. When the sun is low in the sky, the edging also serves as protection from light and glare. You can choose between waved or straight edging.
